

Web offset heatset

Low paper grades MG 1500

Series **MG 1500** is specially designed for a huge variety of different paper grades (LWC, SC, uncoated papers as well as newsprint). Outstanding print stability and press performance are key features of MG 1500.

The low tack of **MG 1500** provides optimum print results even on paper grades which are sensitive to picking and piling. Printing **MG 1500** minimizes the risk of build-up problems on blankets and plates even if sensitive paper grades have to be printed.

Carefully selected raw materials in combination with the most modern production line for offset inks in the world make sure that **MG1500** performs always safely, reliably and constantly on all kinds of printing presses.

For print jobs on high grade papers or if high gloss in combination with very low dot gain and best contrast is required we recommend to use our heatset ink series **MG 1800** which is specifically designed for these kind of jobs

MG 1500 already complies to all requirements of the award criteria of the Blue Angel for printed matter (DE UZ-195 Edition January 2021).

Special Properties

- Fast drying
- High gloss
- Excellent ink-water balance and press performance
- Outstanding trapping behaviour and contrast
- Complies to ISO 2846-1 and ISO 12647-2 standard
- Formulated by using low aromatic mineral oils
