

## Web offset heatset

### LWC MG 1800

**MG 1800** is specially dedicated for high quality paper grades (LWC, woodfree coated papers). Key features of **MG 1800** are its excellent gloss and optimum rub resistance. Besides these particular characteristics **MG 1800** offers outstanding print stability and press performance of course.

The high tack of **MG 1800** provides minimum dot gain and highest contrast.

Considering the tack level we do not recommend to use **MG 1800** on printing substrates which are sensitive to picking and piling. For those paper grades we recommend to use our all-round series **MG 1500**.

Carefully selected raw materials in combination with the most modern production line for offset inks in the world make sure that **MG1800** performs always safely, reliably and constantly on all kinds of printing presses.

**MG 1800** does not comply to the requirements of the award criteria of the Blue Angel for printed matter (DE UZ-195 Edition January 2021).

#### Special Properties

- Fast drying
- Maximum gloss and high brilliance
- Minimum dot gain
- Best rub resistance
- Excellent ink-water balance and press performance
- Outstanding trapping behaviour and contrast
- Complies to ISO 2846-1 and ISO 12647-2 standard
- Formulated by using low aromatic mineral oils
